[Video](#)

Food recipe is a recipe sharing website. Any authenticated or unauthenticated user can see the recipe list and search by ingredients and also select category wise recipes list. In recipe details page, user can see recipe descriptions, ingredients, instructions, and who shares the recipe.

Features: All users can see all recipes that are submitted by authenticated users. Unauthenticated users can see recipes but they can not submit or edit the recipe. Users can register and create menu and submit. Authenticated user can show his/her submitted recipe and can be able to delete and edit.

Technologies Used: HTML, CSS, Bootstrap, Python, Django

➤ Blood Management

[Github Link](#)

[Live Link](#)

Blood Management is a web website where a donor can donate blood and a patient can search for blood. Due to lack of donor information many times patients face challenges to collect blood so this problem can be eliminated by using this software.

Features: Donor able to register and upload profile details and also donor can set his blood donation history. Patients are able to search donor by blood group without registration.

Technologies Used: HTML, CSS, Bootstrap, Python, Django
